

This is a preview of the Future Builders Foundation website. On the top right hand side, you can see the website menu. Currently, we have menu options for Home, About Us, Support Us, and Contact Us, as well as a Donate button. About Us and Support Us are dropdown menus; If you click About Us, it does not lead to a page, and if you click on Support Us, it does lead to its own page. Under About Us, we have pages for Our Mission, Our Team, and Our Model; under Support Us, we have pages for Donate and Zakat. The Donate button leads to the same donate page as the Donate menu item under Support Us. Depending on when you are watching this video, it is possible that the website may be different, but that's okay.

So this is what Hostinger looks like when we log in. To access the website builder, click on Websites on the left hand side. Here, all the websites built on this Hostinger account will show up; the one connect to the domain future-builder-foundation.org is the official website. Anything else listed here is for testing, and you are more than welcome to create a new website to play around with the features and get familiar with the features of the website builder. When you click on Add Website, you'll see a couple of options. The organization's website is built using the Hostinger website builder, so if you are going to make a test website to familiarize yourself I highly recommend going with this option. The next video will go over some of the main features of Hostinger that are used on the Future Builders Foundation website.
